MENTAL INDICATORS OR MENTAL SUBSTANCE 3

MENTAL DIMENSION 3

MENTAL INDICATORS OR MENTAL SUBSTANCE

- [Psychostatics](#)
- Mental contents , [mental indicators](#) , [mental substance](#) , mental thoughts , mental information

MENTAL DIMENSION

- Point : In mental dimension it is the smallest [particle](#) a [mind](#) can imagine , it can resemble a spark of [light](#) , a candle , a lamp etc.
- line : These are the imaginary lines or links between points inside [mind](#)
- plane : these are the 2D imaginary pictures
- Cube : 3d imagination

In mental dimension The conscious [mind](#) is, at least, a fourth dimensional entity. It is similar to or the same as [time](#) and viewpoint. Without [mind](#), there is no experience of [time](#). And without a viewpoint, there is no [mind](#). If we could not view the sequence of experiences that make [up](#) our lives, then there would [be](#) no memory for the previous scenes of our [life](#). To [be](#) aware of the scenes we require [an](#) additional dimension. Hence conscious [mind](#) is at least a fourth dimensional entity. In present [time](#) we view 3 dimensions. In remembering we view the past as a sequence of 2 dimensional pictures or one past incident as a three dimensional incident. If we observe a past (or imaginary incident) in 3 dimensions, then we loose, temporarily, our experience of [time](#) and space in the present. Hence the [mind](#) is a four dimensional entity, and it is, at least sometimes, limited to four dimensions. That is, it does not perceive in five dimensions. When calls are made for all dimensions, then other calls cannot [be](#) handled. When we are emotionally involved in a past incident, we are not aware of the present, or the [passage](#) of [time](#). We are aware only of that past incident. Therefore, we can scan the [time](#) track as a sequence of pictures (2 dimensional images) or enter a memory bubble and perceive it in 3 dimensions. But we cannot [do](#) both. We can scan higher dimensions by sampling them in 4 dimensions. We can flit from one 3 dimensional experience to another. Or even move to and fro between them.

We can imagine a 2 dimensional circle and a 2 dimensional square in the same [place](#), but we cannot imagine a sphere and a cube in the same [place](#)! No two objects can occupy the same space in 4 dimensions!
